Subject: Paden City PCE -

I just received a call from Rob Rice at WV DEP. Rob tells me that PCE levels from the city's production well are up since they last sampled, to about 7.2 per billion. Also, there is an adjacent glass factory that uses water to cool the glass they make which they are testing PCE at about 12 per.

Ex. 5 Deliberative Process (DP)

I asked Rob if he had spoken to Bureau for Public Health and they had not. He's calling Walt Ivey now to apprise him .

DEP/BPH will likely come back to us to request recommendation on next steps.

~Mark

Subject: Paden City PCE - WVDEP Involvement

All,

As follow-up to our Paden City PCE conference call held on Monday (3/25), attached is a brief timeline of WVDEP's involvement with the matter.

Please note that PCE was known to be present in at least one of the groundwater wells for many years prior to WVDEP being notified in 2017 (the beginning of the attached timeline). Also, I have confirmed with the WVDEP project manager assigned to the site that analytical data for groundwater samples collected directly from production wells indicates that PCE concentrations have been trending upward over time.

Thank you,
Casey
